## Deep Learning with Auto-Encoding

Instructor: Prof. Yi Fang  
yfang@nyu.edu

Acknowledge: The slides are partially referred to the online materials by Prof. Hung-yi Lee from NTU, Auto-encoder session, and also other online materials  
Note that some figures and contents used in the presentation are from public available resources, the original authors own the copyright of the figures and content

# Unsupervised Learning

“We expect unsupervised learning to become far more important in the longer term. Human and animal learning is largely unsupervised: we discover the structure of the world by observing it, not by being told the name of every object.”

– LeCun, Bengio, Hinton, Nature 2015

As I've said in previous statements: most of human and animal learning is unsupervised learning. If intelligence was a cake, unsupervised learning would be the cake, supervised learning would be the icing on the cake, and reinforcement learning would be the cherry on the cake. We know how to make the icing and the cherry, but we don't know how to make the cake.

- Yann LeCun, March 14, 2016 (Facebook)

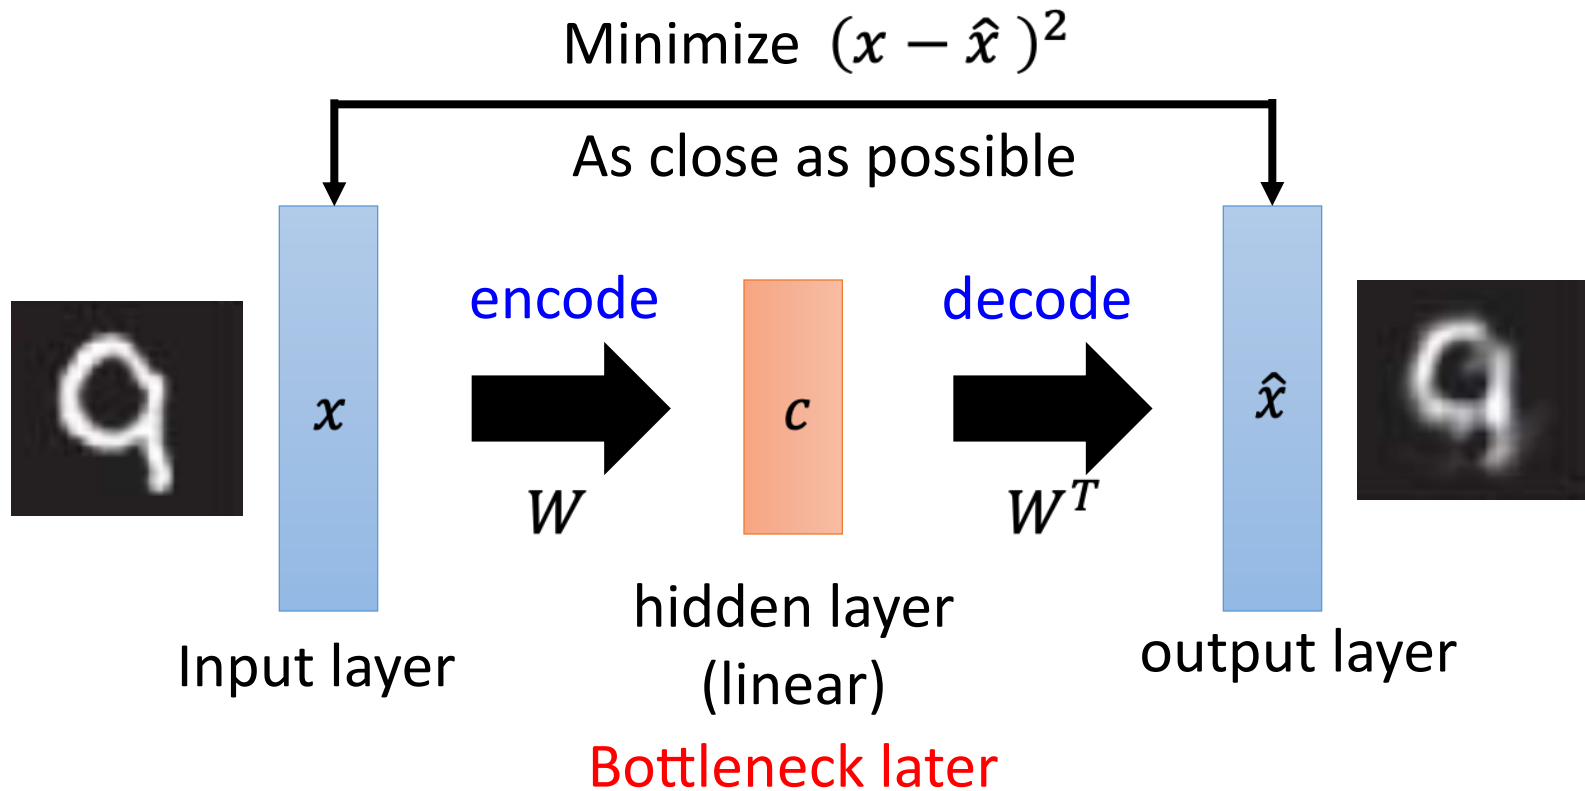

# Unsupervised Learning

What we have learnt:

- Manifold Learning: PCA, LLE, MDS, etc.

Acknowledge: The slides are partially referred to the online materials by Taegyun Joen, <https://www.slideshare.net/TaegyunJeon1/pr12-you-only-look-once-yolo-unified-realtime-object-detection> and online YOLO paper and other materials (from ECS289g by Prof. Lee)

# Recap: PCA

Output of the hidden layer is the code

# Auto-encoder

# Deep Auto-encoder

Symmetric is not necessary.

- Of course, the auto-encoder can be deep

# Deep Auto-encoder - Example

# Auto-encoder – Text Retrieval

## Vector Space Model

## Bag-of-words

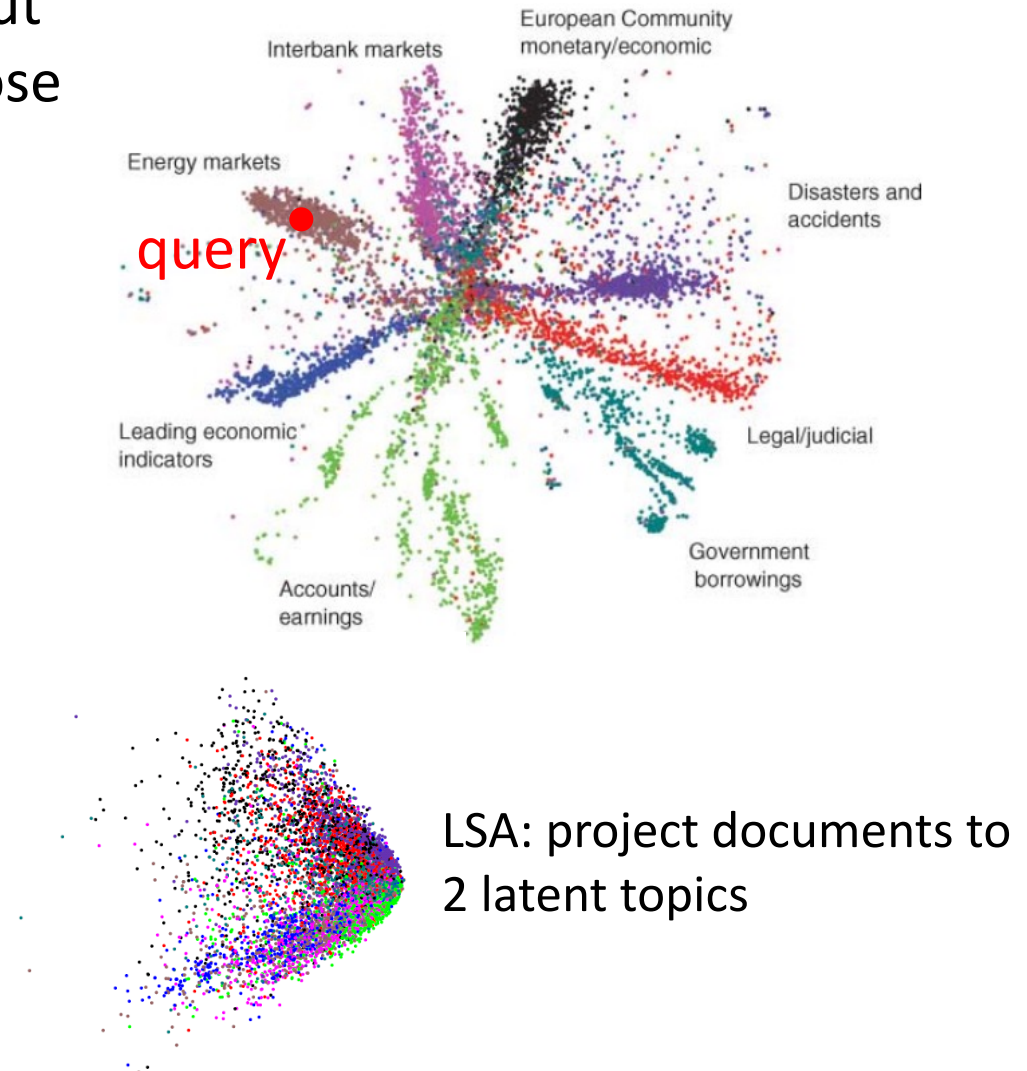

word string:  
"This is an apple"

this	●	1
is	●	1
a	●	0
an	●	1
apple	●	1
pen	●	0
⋮	●	

Semantics are not considered.

# Auto-encoder – Text Retrieval

The documents talking about the same thing will have close code.

# Auto-encoder – Similar Image Search

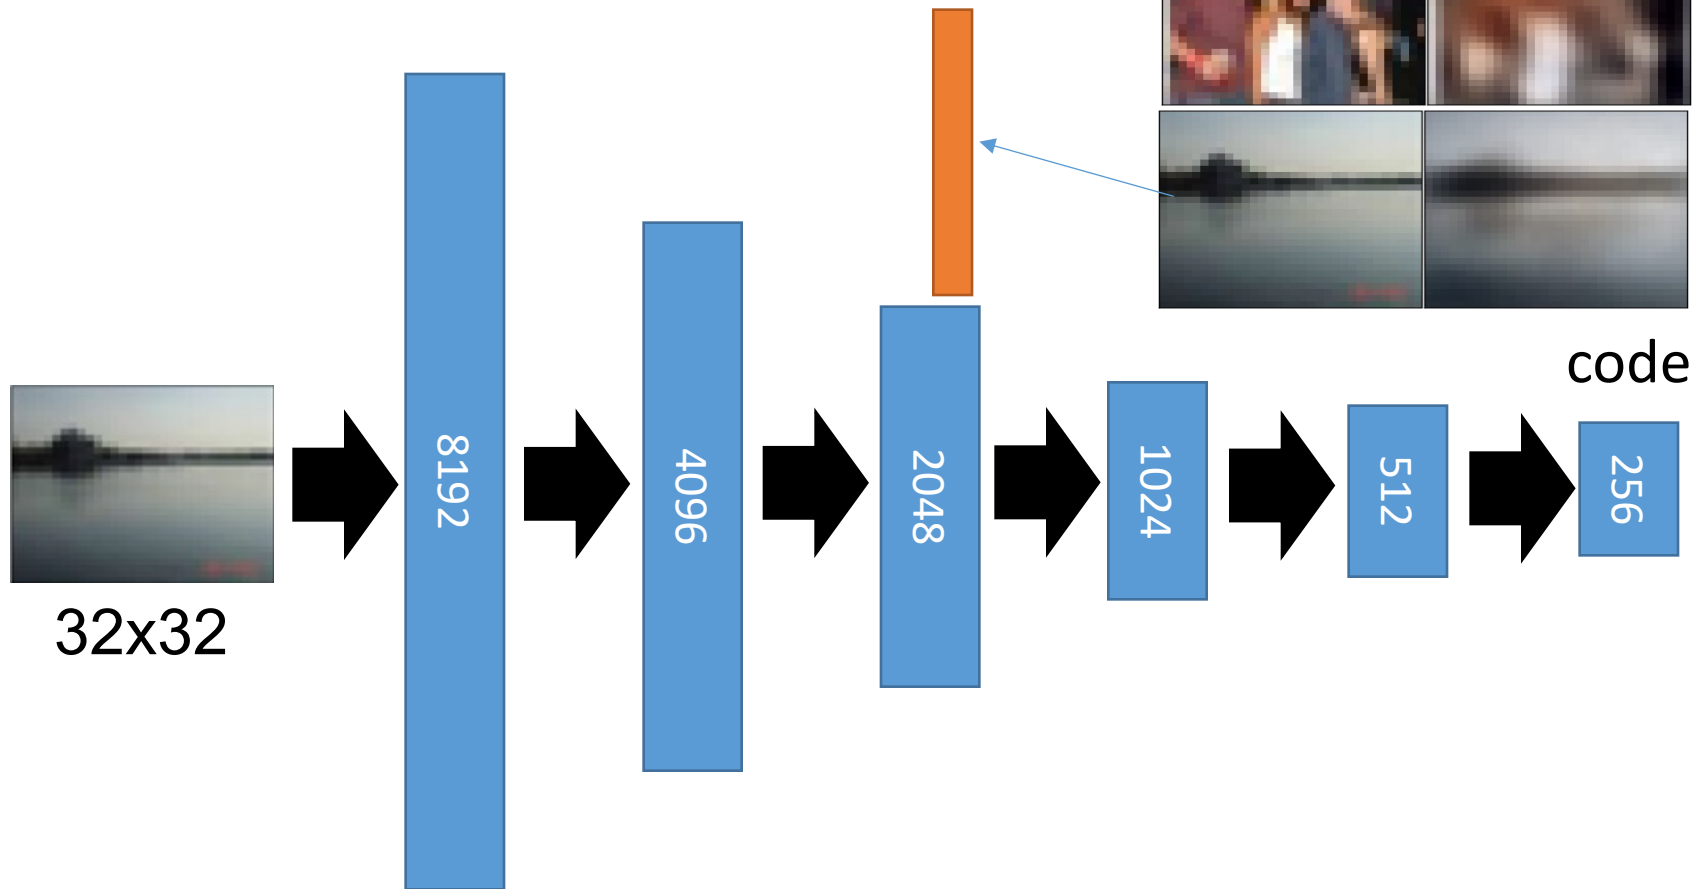

Retrieved using Euclidean distance in pixel intensity space

(Images from Hinton's slides on Coursera)

Auto-  
encoder  
for CNN

# Unpooling

**Nearest Neighbor**

1	2
3	4

1	1	2	2
1	1	2	2
3	3	4	4
3	3	4	4

Input: 2 x 2

Output: 4 x 4

**"Bed of Nails"**

1	2
3	4

1	0	2	0
0	0	0	0
3	0	4	0
0	0	0	0

Input: 2 x 2

Output: 4 x 4

Unpooling Result

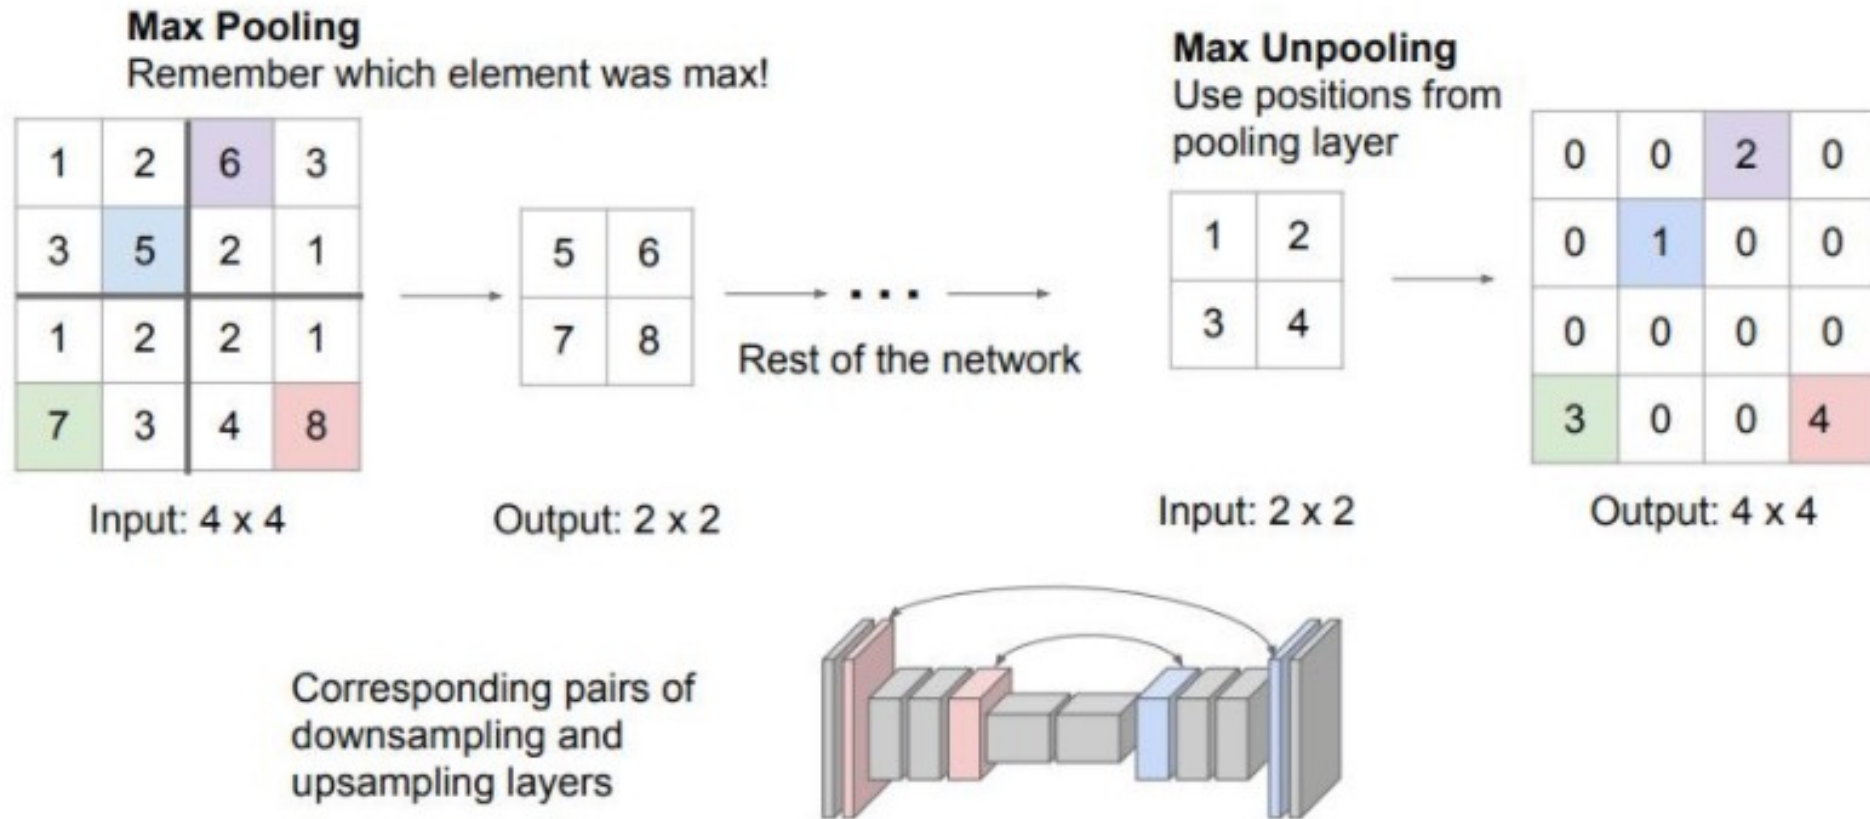

14 x 14

28 x 28

# Max Unpooling

# Transpose Convolution

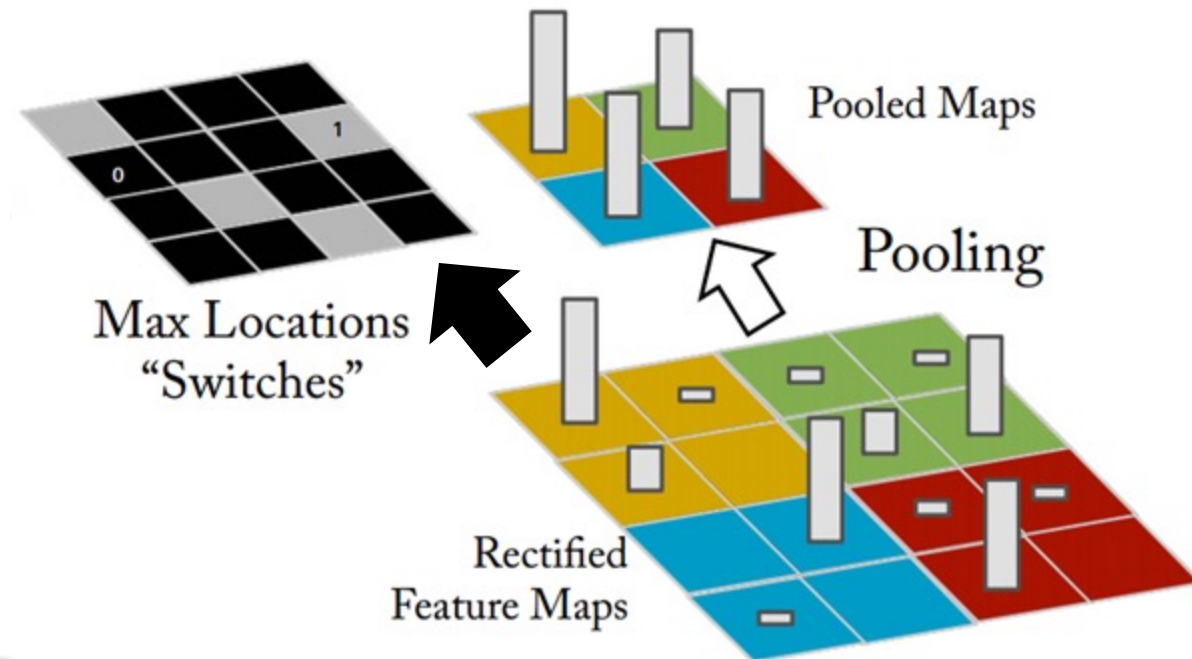

# CNN -Unpooling

14 x 14

28 x 28

Alternative: simply  
repeat the values
